The sum of non- dioxin like PCB's of the above mentioned sample is below the maximum level of 10 µg/kg relative to a feed with a moisture content of 12 %

Remarks: «-» in «Concentration» column means that the actual value does not exceed the detection limit of the method

LABORATORY RESULTS:

based on the analytical results, we confirm that Total concentration in TEQ of PCDD/F+Dioxin-like PCB not exceed the levels indicated in EC/2002/32, EC/2023/915, EU Regulation 277/2012 and its Ammendments

- **During the tests, the requirements for environmental conditions are fulfilled in accordance with the regulatory documents;**
- **There are no additions, deviations, or exceptions to the test methods;**
- **In the column with analysis results, after the words "less/more", a numerical value is indicated, which is the lower/upper limit of the range in accordance with the current accreditation methods for the specified test methodology.**
